CLIENT QUICK-ACTION GUIDE

How to Create a Safe Staging Clone in Pressable

Audience: Dr. Jeffrey S. Burns & Practice Administration

Hosting Portal: Pressable (my.pressable.com)

Target Website: Jeffrey Burns (`jeffreyburns.com`)

Estimated Time: ~3 minutes (Self-Service)

100% Zero-Risk Safety Guarantee

This procedure creates an independent sandbox copy of your website files and database. **Your live website, active phone numbers, patient inquiries, and daily clinic operations remain 100% untouched and uninterrupted.**

3 Simple Steps to Create Your Staging Clone

1 Log in to Pressable

- Open your web browser and navigate to: https://my.pressable.com/
- Sign in using your Pressable account email and password.

2 Locate Your Website

- From the left navigation menu or dashboard, click on **Sites**.
- Find and click on your website name: **Jeffrey Burns** (`jeffreyburns.com`).

3 Create the Staging Clone

- On the site overview screen, look for the Clone Site button in the upper right (or click the **Actions** ••• menu and select **Clone Site**).
- When the pop-up modal appears:
  - **Clone Name:** Enter `jeffreyburns-staging` (or `dreamsmile-staging`).
  - Leave the default option selected to copy both *Files and Database*.
- Click the blue Create Clone button.
- **Wait 2 to 3 minutes** while Pressable automatically spins up the isolated staging sandbox.

You're All Done! What Happens Next:

Once Pressable finishes, your new staging site will appear in your site list with a private address (e.g., `https://jeffreyburns-staging.mystagingwebsite.com`). Simply notify your web development team that the clone is ready. They will take care of all theme installation, content verification, and safety testing inside that private sandbox.
